

## THE GATEWAY

Elevator Cladding  
San Francisco, California USA

### M13Z-293

The Gateway project uses M13Z-293 designer triple shute wire mesh to clad their elevator cab interiors. With the help of overhead lighting, the woven wire mesh really lights up with reflectivity. While the M13Z-293 is not an opaque wire mesh, it serves as a way to add texture to the walls while allowing background color to show through.
