

HYATT REGENCY HOUSTON GALLERIA

Interior Space Divider
City (If Available), State (Spelled Out) USA

IPZ-25

P-282

As part of the dynamic Uptown District in Houston, Texas, the Hyatt Regency Houston Galleria was designed by Gensler to appeal to business and leisure travelers. The design team was inspired by the geology associated with Houston's oil and gas industry and incorporated patterns and colors that reflect the special character of the region, thus giving the hotel added authenticity and sense of place.

The open, multi-function lobby serves as a workplace, social gathering area and relaxing living room with a bar, lounge, market and formal dining. Areas are defined without solid walls to maintain the open, easy flow of spaces. As such, Zahner engineered and fabricated a series of interior lobby partition walls manufactured from Solanum Steel and a combination of Banker Wire's IPZ-25 (in stainless steel and copper) and P-282 (in copper).
