

STUDIO CITY WATERFALL

RGB-Lit Sculpture and Projection Screen
Los Angeles, California USA

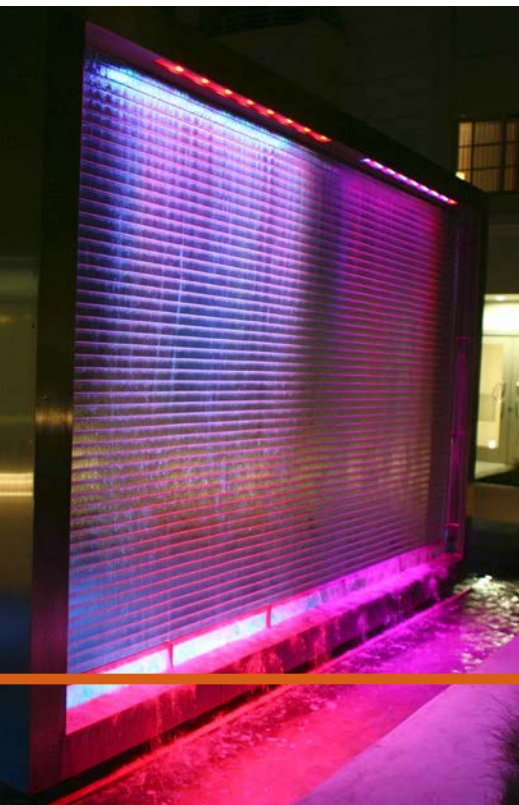

M13Z-247

The Studio City neighborhood of Los Angeles was established along with the prominent movie studios during the early 20th century. In the 150,00 square foot, high-end, Grand Vista apartment complex, ARTBOX Construction Inc. created a waterfall feature that emphasizes the connection between Studio City and the movie industry and provides a canvas for multimedia entertainment. The residents can play videos or slide shows while enjoying their outdoor surroundings. At other times, the waterfall simply provides a relaxing enclave in the midst of a busy neighborhood.

Banker Wire woven wire mesh was used to create a delicate curtain of water that acts as a projection screen. The M13Z-247 mesh, used for the installation, is composed of long, straight sections of horizontally orientated wire, woven together with tight groupings of three vertically oriented wires. Translucent when not in use as a projection screen, the mesh and water filter natural light, and together, create the sound of rain that brings a sense of tranquility to the place.

"Banker Wire's quality of products and attention to detail helped ARTBOX Construction Inc. achieve a beautiful and functional installation. When it comes to architectural woven wire, we'll use Banker Wire again," says Babak Emanuel, principal at ARTBOX Construction.
